For use with Wavemetrics Igor Pro version 5.03 or above.

This software was primarily developed when I was at CIRES, Univ. of Colorado with Jose-Luis Jimenez (2). This software is 'open source' but if you use its results for presentations or publications etc, I'd ask you acknowledge us and cite our EST and ACP papers.

Many thanks to Douglas Worsnop (3), Rami Alfarra (4), Manjula Canagaratna (3), James Allan (5), and Hugh Coe (5) for valuable inputs. Special thanks to Edward Dunlea (1) for helping me in making the panel of this software, and to Katja Dzpina (2) for testing the codes. I also want to thank John Jayne (3) for contribution to the Pittsburgh study, from which we acquired the dataset used for developing the method, Ann Middlebrook (6), Frank Drewnick (7), Tim Onarsch (3), the rest of the Jimenez group at CU, and the wider AMS user's community for discussions and feedback.

For detailed information on the method and mathematics, I suggest you read my EST paper referenced below.

For the application of the method and detailed discussions on HOA and OOA in an urban area, I suggest you read my ACPD paper. Papers by Jayne, Jimenez, Allan, and Alfarra listed below are also strongly recommended for a better understanding of the principles, instrumentation, and data analysis approach pertain to AMS

Any questions or comments, feel free to email me at qz@asrc.cestm.albany.edu.
